

WARDA SHAHZAD

PhD Chemistry | Kesterite (CZTS), Thin-Film, Photovoltaics, Semiconductor

Attock, Pakistan. warda.shahzad.17@gmail.com. [Research Website](#)

RESEARCH PROFILE

I am completing my PhD in Chemistry at Department of Chemistry, COMSATS University Islamabad (Abbottabad Campus), Pakistan. My research focuses on the structural, optical, and electronic properties of solution-processed $\text{Cu}_2\text{ZnSnS}_4$ (CZTS) kesterite thin-film solar absorbers. My doctoral research applies systematic alkali-cation doping (Li, Na, K) via aqueous chemical bath deposition to suppress Cu/Zn antisite defects and secondary phases, the primary loss mechanisms limiting CZTS device efficiency, and to tune the resulting structural, optical, and electrical properties. My characterization toolkit spans XRD (Williamson-Hall analysis, dislocation density, microstrain), SEM/EDX, UV-Vis/Tauc-plot modelling, dielectric and conductivity analysis, and DFT-based structural/DOS/band-structure interpretation.

I am seeking postdoctoral opportunities to extend this work to new synthesis platforms and semiconductor material systems.

EDUCATION

PhD, Chemistry

Sep 2020 – Present

COMSATS University Islamabad, Abbottabad Campus, Pakistan

Thesis: "Exploration of the Physical Properties of Kesterite Thin Films Modified by Alkali Metal Cations for Sunlight Harvesting"

MS, Chemistry

Sep 2017 – Aug 2019

COMSATS University Islamabad, Abbottabad Campus, Pakistan

Thesis: "Visible Light Driven Photocatalysis Based on Alkaline Earth Metal Zirconate Perovskite/ Graphene Oxide Composite for Wastewater Treatment"

MSc, Chemistry

Oct 2015 – June 2017

University of Wah, Pakistan

RESEARCH EXPERIENCE

PhD Researcher, Chemistry

Sep 2020 – Present

COMSATS University Islamabad, Abbottabad Campus

- Investigated Li, Na, and K alkali-cation doping in CZTS kesterite thin films for defect engineering and secondary-phase suppression, using a systematic three-metal comparison on the same aqueous chemical-bath-deposition platform.
- Developed a two-step thermal annealing protocol for Li-doped CZTS that separated dopant effects from thermal effects, reducing dislocation density from 7.3 to $2.13 \times 10^{14} \text{ m}^{-2}$ and tuning bandgap from 1.36 to 1.27 eV ; measured electrical conductivity of $3.6 \Omega^{-1}\text{cm}^{-1}$ for the optimized film.
- Showed Na doping narrows the optical bandgap from 1.5 to 1.0 eV while reducing microstrain from 0.37 to 0.13×10^{-3} , linking structural relaxation directly to optoelectronic performance.
- Demonstrated K doping increases crystallite growth from 40 to 52 nm alongside a bandgap shift from 1.50 to 1.42 eV , while retaining the tetragonal kesterite structure.
- Extended the doping study into Na/Li and Li/K co-doping systems, currently being prepared as an additional manuscript.
- Applied Williamson-Hall analysis, SEM/EDX, UV-Vis/Tauc-plot modelling, and dielectric/conductivity analysis across each doping series to build quantitative structure-property proxies for defect suppression.

- Engaged with DFT-based structural optimization, density-of-states, and band-structure outputs to interpret experimental trends (computational runs performed in collaboration; interpretive role).
- Presented research at SSCS 2025 (COMSATS, Abbottabad 2nd Prize, poster), ICRA-C 2024 (NUST Islamabad, oral), and ICC RTC&RET 2023 (University of Swat, poster); completed advanced analytical instrumentation training at the National Centre for Physics, Islamabad (2026).
- Mentored MS students on synthesis and characterization technique; served as a peer reviewer for the Journal of Materials Science: Materials in Electronics (Springer Nature).

MS Researcher, Chemistry

Sep 2017 – Aug 2019

COMSATS University Islamabad, Abbottabad Campus

- Synthesized Mn/Ba-doped strontium zirconate (SrZrO_3) perovskites anchored on graphene oxide by coprecipitation and studied their visible-light photocatalytic performance against methylene blue dye degradation for wastewater treatment.
- Showed that substituting larger Ba^{2+} cations into SrZrO_3 enables bandgap engineering and antisite-defect formation, work that introduced defect-engineering and bandgap-tuning concepts later applied to CZTS.

Research Internship

Jul – Aug 2017

POF Institute of Technology, Pakistan Ordnance Factories, Wah Cantt (POF SJL Department)

CONFERENCE PRESENTATIONS

Poster Competition, Salimuzzaman Siddiqui Chemical Society, 2025: Poster (2nd Prize)

Department of Chemistry, COMSATS University Islamabad, Abbottabad Campus
April 21, 2025

International Conference on Research Advancements in Chemistry 2024: Oral Presentation

Department of Chemistry, School of Natural Sciences (SNS), NUST Islamabad
Aug 21-23, 2024

International Chemistry Conference on Recent Trends in Chemistry and Renewable Energy Technology, 2023: Poster

Institute of Chemical Sciences, University of Swat, Swat
Jun 8-9, 2023

PROFESSIONAL TRAINING & WORKSHOPS

Hands-on Training Workshop in Advanced Analytical Instrumentation

National Centre for Physics, Islamabad
Jun 29-Jul 3, 2026

Three-Day Conference: Nanomaterials; New Trends in Development and Applications

Forman Christian College, Lahore
Jan 29-31, 2019

EMNT 2018 International Workshop on Energy Materials and Nanotechnology

COMSATS University Islamabad, Abbottabad Campus
Aug 15-16, 2018

PROFESSIONAL SERVICE

- Peer Reviewer, Journal of Materials Science: Materials in Electronics (Springer Nature)
- Mentored MS-level students in thin-film synthesis and characterization technique

RESEARCH TOOLKIT

Materials Synthesis: Chemical bath deposition · Two-step thermal annealing · Composition screening

Structural Analysis: XRD · Williamson-Hall analysis · Crystallite size, microstrain & dislocation density · VESTA modelling

Composition & Morphology: SEM · EDX/EDS · Grain size analysis

Optical Analysis: UV-Vis spectroscopy · Tauc analysis · Refractive index · Dielectric & conductivity modelling

Computational: DFT: structural optimization, DOS, band structure (interpretive engagement)
